

Predicted source treatment effect

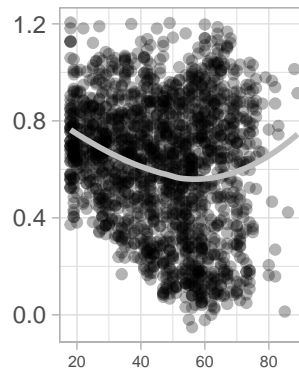

(A) Mainstr. media trust

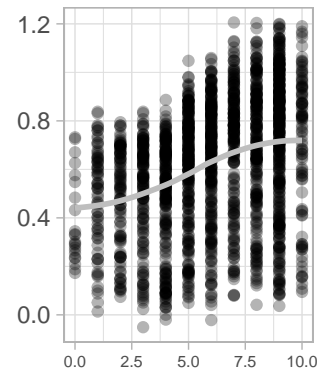

(B) Vote choice AfD

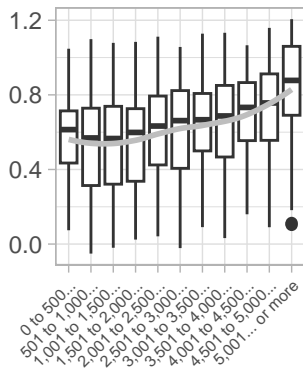

(C) Age

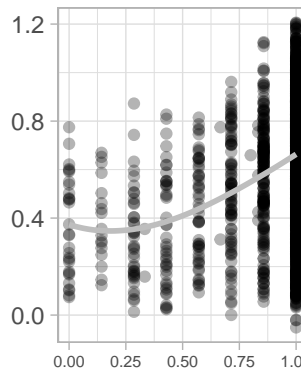

(D) Political knowledge

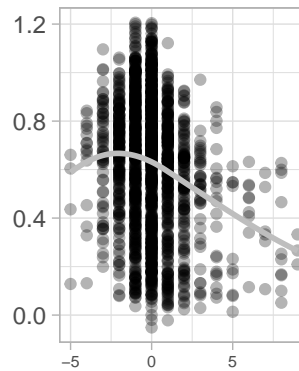

(E) Income

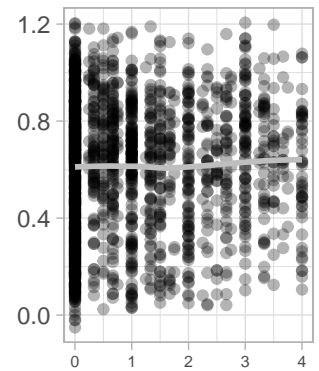

(F) Mainstr. media knowl.

(G) Overconfidence

(H) Sharing frequency

Note: Plots display variation of predicted individual treatment effects across values of continuous (scatter plots) and categorical (box plots) covariates (the 8 most important in terms of treatment heterogeneity). The gray curve is a simple smoothing curve.
